Ajay P

Full-Stack Engineer · Technical Lead — AI-Assisted Development, Node.js, Laravel, AWS

Calicut, Kerala, India · ajaypaju008@gmail.com · linkedin.com/in/ajaypofficial · github.com/ajaypaju

Summary

Technical Lead with 5+ years building and running a production multi-tenant SaaS platform used by 500+ organizations. Own architecture, CI/CD, Docker and AWS deployments, and production reliability end to end. Lead the platform's AI work: a Claude Code integration that turns plain-language prompts into platform tasks, a role-based MCP server for AI clients, AI bot users that take assigned tasks, and an LLM-powered in-product chat. Set engineering standards, review code and mentor developers; cut reporting API latency from ~900 ms to ~300 ms.

Technical Skills

- **AI & Dev Tools:** Claude Code, LLM API integration, MCP (Model Context Protocol) servers, AI agents and bot users, prompt engineering
- **Backend:** Node.js, NestJS, PHP, Laravel (9–13), REST APIs, queues and background jobs
- **Frontend:** HTML, CSS, JavaScript
- **Cloud & DevOps:** AWS (EC2, S3, RDS), Docker, GitLab CI/CD, GitHub, Git workflows, Cloudflare, Linux, monitoring
- **Databases:** MySQL (schema design, query optimization), MongoDB, Redis
- **Auth & Security:** OAuth2 SSO, RBAC (policies and middleware)

Experience

Infinite Open Source Solutions LLP · Calicut, Kerala

Technical Lead · Apr 2026 – Present

- Own architecture, technical delivery and production reliability for the company's multi-tenant SaaS platform.
- Connected Claude Code to the platform so a plain-language prompt creates tasks automatically, removing manual task entry.
- Built a role-based MCP server that exposes platform data and actions to AI clients, scoped to each user's role and permissions.
- Introduced AI bot users: agent accounts that are assigned tasks like any team member and carry out automated work.
- Built LLM-powered chat workflows for in-product help and assisted automation.
- Own deployment workflows on GitLab CI/CD, Docker and AWS (EC2, RDS, S3), with monitoring; delivered on-premise deployments for isolated infrastructure.
- Set engineering standards, review pull requests and mentor junior developers; lead production-readiness and incident-resolution practices.
- Coordinate releases with Product and QA; plan and deliver sprint work.

Software Engineer · Oct 2021 – Mar 2026

- Built REST APIs and frontend modules for a multi-tenant SaaS used by 500+ organizations: time tracking, project management, leave, screenshot capture, activity logging and reporting.
- Cut reporting API latency from ~900 ms to ~300 ms and sped up report generation 60% through MySQL query optimization and Redis caching.
- Designed and optimized MySQL and MongoDB schemas for backend and reporting workloads.
- Integrated Stripe, Razorpay, AWS S3, email/SMS, webhooks and OAuth2 SSO.
- Implemented RBAC with Laravel policies and middleware; built queue-based background jobs and data-aggregation pipelines.
- Shipped features through CI/CD workflows, code reviews and release support.

Awards

- Winner, company-wide AI Prompt Engineering Challenge
- Best R&D Team Performer (2023–2025)
- Best Programmer Award (2022)

Education

B.Sc. Computer Science — People's Co-operative Arts and Science College, Kasaragod · 2020
